**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of claims 1-6 in the reply filed on 06/06/05 is acknowledged.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2, 3, 4, 5, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Annamalai (US patent 5,376,579) in combination with the applicant's admitted prior art (AAPA) of this application.

With respect to claims 1, 3, and 4, Annamalai teaches a semiconductor device (see fig. 3, abstract and associated text) comprising:

a high resistivity polysilicon handle wafer or polycrystalline layer 5;

a buried oxide layer 2 over the polysilicon handle wafer or polycrystalline layer 5; and

a silicon layer 1 over the buried oxide layer.

Further with respect to claims 1, 2, 3, 4, 5, and 6, Annamalai fails to teach that the device has an RF input.

AAPA teaches that using high resistivity substrate to form RF devices. See the Background of the Invention on pages 1 and 2 of this application.

It would have been obvious to one of ordinary skill in the art of making semiconductor devices to include an RF input on the substrate of Annamalai

Art Unit: 2814

to form an RF device having reduced losses and cross-talk. See the Background of the Invention on pages 1 and 2 of this application.
